What do butterflies eat?

---

What is the worm-like larva of a butterfly called?

---

## DID YOU KNOW?

**Butterflies have taste receptors on the ends of their legs, so they taste with their feet!**

**There are more than 28,000 different species of butterflies in the world.**

**The "butter" in butterfly comes from the first named species, the "brimstone butterfly," which was the color of butter.**
